

PseudoAI Terms of Service

Effective date: 5 September 2026

These Terms of Service (“Terms”) govern the use of PseudoAI, including the PseudoAI plugin for ChatGPT and Codex, its user interface, related MCP services, and any associated PseudoAI services (together, the “Service”).

The Service is provided by **Dutchhamburgers**, trading as PseudoAI (“PseudoAI”, “we”, “us” or “our”), registered at **Vierbanse Gantel 21, Tilburg**, the Netherlands, Chamber of Commerce number **42032983**.

By accessing or using the Service, you agree to these Terms.

1. Purpose of PseudoAI

PseudoAI helps users reduce the amount of sensitive or identifying information shared with AI services.

Depending on the configuration used by your organization, PseudoAI may:

- analyse text or documents for potentially identifying or sensitive information;
- highlight information for user review;
- replace selected information with pseudonyms or tokens;
- allow the user to review and approve the minimized version before it is submitted to an AI service;
- maintain mappings required to restore pseudonymized values within the applicable protected environment or session; and
- restore pseudonymized values in AI-generated responses where this functionality is enabled.

PseudoAI is a data-minimization and privacy-support tool. It does not itself determine whether information may legally or contractually be shared with an AI provider.

2. Relationship with ChatGPT and other third-party services

PseudoAI may operate in connection with third-party services such as ChatGPT, Codex or other services provided by OpenAI.

PseudoAI is an independent service and is not developed, operated, sponsored or endorsed by OpenAI unless explicitly stated otherwise.

Your use of ChatGPT, Codex and any other third-party service remains subject to the terms, privacy policies and account settings of the relevant third party.

Once information is intentionally submitted to a third-party AI service, the processing of that information by the third party is governed by the terms and privacy practices applicable to that service and account.

3. User control and responsibility

PseudoAI is designed to support human review before information is submitted to an AI service.

You remain responsible for:

- determining whether you are authorised to process and submit the information concerned;
- reviewing the information identified by PseudoAI;
- reviewing the minimized or pseudonymized version before submission;
- deciding whether the information may be sent to the selected AI service;
- complying with your organisation's policies and instructions; and
- complying with applicable laws, confidentiality obligations and professional duties.

You must not deliberately circumvent PseudoAI controls or attempt to transmit information that your organisation has prohibited from being shared with an AI service.

4. Detection is not guaranteed

Automated detection of personal, confidential or otherwise sensitive information is inherently imperfect.

PseudoAI may fail to detect information, may classify information incorrectly or may identify information that does not require protection.

Accordingly, PseudoAI does not guarantee that:

- every item of personal or confidential information will be detected;
- all information selected for removal or pseudonymization is sensitive;
- a minimized document contains no personal or confidential information; or
- use of the Service by itself establishes compliance with applicable privacy, confidentiality or security requirements.

Users should review the result before submitting information to an AI service.

5. Pseudonymization is not anonymization

Where PseudoAI replaces information with tokens, aliases or other pseudonyms, this is intended to reduce disclosure of the original information. The original information can generally be linked back to an identifiable person only when the corresponding token key or

mapping information is available. This token key is maintained and controlled by the relevant organisation, unless otherwise agreed in writing.

Pseudonymization does not necessarily constitute anonymization. Information may still qualify as personal data where it can be linked back to an identifiable person using the token key, mapping information or other additional information.

Users and organisations remain responsible for determining the appropriate legal and security classification of the resulting information.

6. Your information

You retain all rights that you have in text, documents and other content you provide to the Service (“User Content”).

You grant PseudoAI only the rights necessary to process User Content for the purpose of providing the Service.

How PseudoAI processes personal data, including applicable retention periods, recipients and user rights, is described separately in the **PseudoAI Privacy Policy** at:

<https://pseudoai.nl/privacyverklaring>

Where your organisation has entered into a separate data processing agreement or other contractual arrangement with PseudoAI, that agreement applies in addition to these Terms.

7. Organisation-controlled deployments

PseudoAI may be configured differently for different organisations.

For example, an organisation may operate parts of PseudoAI within its own infrastructure, private cloud or other controlled environment and may define its own:

- access controls;
- detection rules;
- organisation-specific terminology;
- retention periods;
- logging configuration;
- approved AI providers; and
- policies governing which information may be submitted to AI services.

If you use PseudoAI through an organisation, your organisation may impose additional conditions or restrictions on your use of the Service.

8. Acceptable use

You may use PseudoAI only for lawful purposes and in accordance with these Terms.

You must not:

- use the Service in violation of applicable law;
- attempt to obtain unauthorised access to PseudoAI or another user's environment;
- interfere with or disrupt the operation or security of the Service;
- reverse engineer the Service except where expressly permitted by applicable law;
- introduce malicious software or code;
- use the Service to circumvent security, privacy or access controls;
- submit passwords, authentication tokens, API keys, MFA or one-time authentication codes for transmission to third-party AI services; or
- use the Service in a manner that violates the applicable terms or usage policies of OpenAI or another connected service.

9. AI-generated output

PseudoAI does not control the accuracy, completeness or reliability of responses generated by third-party AI services.

AI-generated information may contain errors or fabricated information and should be independently assessed where appropriate.

PseudoAI does not provide legal, medical, financial or other professional advice.

10. Accounts and access

Certain PseudoAI functionality may require an active PseudoAI account, an organisation-specific deployment or a separate commercial agreement.

You are responsible for maintaining the confidentiality and security of credentials used to access PseudoAI.

Access to the public PseudoAI plugin does not automatically create a right to access paid, organisation-specific or restricted PseudoAI services.

11. Fees and commercial agreements

Where PseudoAI is provided under a subscription, licence, order form or other commercial agreement, the applicable fees and payment conditions are governed by that agreement.

Installation or availability of the PseudoAI plugin through an OpenAI directory does not by itself constitute the purchase of a PseudoAI licence.

12. Intellectual property

PseudoAI and its licensors retain all intellectual property rights in the Service, including its software, user interface, detection technology, documentation, trademarks and other proprietary materials.

These Terms do not transfer ownership of PseudoAI intellectual property to you.

“PseudoAI” and associated branding may not be used in a manner that suggests sponsorship, endorsement or affiliation without our prior permission.

13. Service availability and changes

We aim to provide a reliable Service but do not guarantee uninterrupted or error-free availability.

Functionality may depend on third-party platforms, network services, customer infrastructure and APIs outside PseudoAI’s control.

We may modify, improve, restrict or discontinue functionality where reasonably necessary, including for security, compliance or compatibility reasons.

Where separate contractual availability or service-level commitments have been agreed with an organisation, those commitments take precedence over this section.

14. Suspension and termination

We may suspend or restrict access to the Service where reasonably necessary to:

- protect the security or integrity of the Service;
- prevent unlawful or abusive use;
- comply with legal requirements;
- address material violations of these Terms; or
- protect other users or third parties.

You may stop using the Service at any time.

Where access is provided under an organisation’s licence or agreement, termination and data-handling arrangements may additionally be governed by that agreement.

15. Disclaimer

To the maximum extent permitted by applicable law, the Service is provided on an “as available” basis.

PseudoAI is intended to reduce privacy and confidentiality risks associated with the use of AI services. It is not a substitute for organisational security measures, privacy governance,

professional judgement or legal compliance procedures.

No software-based detection or data-minimization mechanism can provide an absolute guarantee that sensitive information will never be disclosed.

16. Limitation of liability

To the maximum extent permitted by applicable law, PseudoAI is not liable for indirect, incidental, consequential or special damages arising from the use or inability to use the Service.

Where the Service is provided under a separate commercial agreement, the liability provisions of that agreement take precedence over this section.

Nothing in these Terms excludes or limits liability that cannot lawfully be excluded or limited.

17. Changes to these Terms

We may update these Terms when the Service, applicable law or our business practices change.

The current version will always be published at <https://pseudoai.nl/gebruiksvoorwaarden> and will state its effective date.

Where required by law or contract, we will provide appropriate notice of material changes.

18. Governing law

These Terms are governed by the laws of the Netherlands, without prejudice to mandatory rights that may apply under the laws of another jurisdiction.

Any dispute shall be submitted to the competent court in **Tilburg, The Netherlands**, unless mandatory law provides otherwise.

19. Separate customer agreements

If your organisation has entered into an order form, licence agreement, master services agreement, data processing agreement, service-level agreement or other written agreement with PseudoAI, that agreement applies in addition to these Terms.

If there is a conflict between these Terms and such an agreement, the separately executed agreement prevails to the extent of that conflict.

20. Contact
